Random Access

cylinder = set of similar tracks for all platters

(virtual) tracks

platter

spindle

arm

(disk) heads
Cost of a Random Access

1. seek-time $t_s$ (arm movement)

2. rotational delay $t_r$ (wait for the right angle)

$$\frac{n}{200} \text{ sec}$$

$$t_r = \frac{n}{400} = 2.5 \text{ ms}$$

$$\frac{12000 \text{ RPM}}{60} \Rightarrow 200 \text{ KPS}$$
Sequential Access

cylinder = set of similar tracks for all platters

platter

spindle

arm

(virtual) tracks

(disk) heads
Cost of a Sequential Access

1. seek to cylinder $t_s$ (arm movement)

2. rotational delay $t_r$ (wait for the right angle)

3. transfer time $t_{tr}$ (transfer the actual data)
Cost of a Sequential Access

1. seek to cylinder $t_s$ (arm movement)
2. rotational delay $t_r$ (wait for the right angle)
3. transfer time $t_{tr}$ (transfer the actual data)
4. switch to different head on the same track
5. rotational delay $t_r$ (wait for the right angle)
6. transfer time $t_{tr}$ (transfer the actual data)
Track Skewing

rotation done while moving disk head

Simulation: Read 1,000 blocks of size 8 KB

TR: transfer rate in MB/sec

Each block randomly read:

\[ t_{\text{random}} = 1,000 \times (\text{avg access time} + \frac{8\text{KB}}{\text{TR}}) \]
Simulation: Read 1,000 blocks of size 8 KB
